GLOSSARY

Tankers: Crude petroleum, petroleum product, and chemical tankers, LNG and LPG tankers.

1) General Tankers: Ship arranged for the carriage of liquid cargoes in tanks integral to the hull.

2) Chemical Tankers: Ships structurally arranged for particular service or cargoes. This class may include asphalt bitumen, chemical, chlorine, phosphorus, sulphur, water and wine tankers.

3) LNG and LPG Tankers: A category of waterborne cargo movement which includes primarily liquefied natural gas (LNG) and liquefied petroleum gas (LPG), and other manufactured gases, and natural gas products.

Gross Tonnage - The internal cubic capacity of the ship expressed in tons (100 cubic feet to the ton) and measured in accordance with the natural tonnage regulations.

Deadweight Tonnage (DWT) - The carrying capacity of a vessel in tons of 2,240 pounds. It is the difference between the light ship weight and the displacement loaded.

Draft - The vertical distance between the waterline and the keel. The draft shown in this report is full load draft, measured in feet.

Speed - One knot indicates a speed of one nautical mile (6,080.27 feet) an hour.

Country of Registry - The nation in which a vessel is registered and under whose flag it sails.

INTRODUCTION

This publication is a compilation of statistical data on the world's tanker fleet, as of January 1, 1984. The ships included have been placed in one of five categories (e.g., general, chemical, etc.), and within each category, they are listed alphabetically. Five basic ship characteristics are displayed for each vessel: year built, gross tonnage, deadweight tonnage, speed in knots and draft in feet. Class totals are presented at the end of each category of ship, with a total for all classes of ships appearing as the last entry for each respective nation. Country totals have been added to provide a grand total for world tanker fleet in the Summary Table.

The Summary Table provides information on each country of registry and on each of the five categories of tankers. The general tanker category includes general tankers only. The special tanker class contains tankers which were designed for a specific type of cargo. In this category are grouped molasses, Tug/Barge, whaling, and wine tankers. The chemical tanker class contains asphalt, asphalt bitumen, bitumen, phosphorus, solvents, and sulphur tankers. The LPG and LNG tankers are of specific design to carry liquefied gases (pressurized and refrigerated).

The data included in this volume were gathered from government documents available to the Maritime Administration as well as other public sources.
